**Discrete Applied Mathematics**
**Volume 149, Issues 1–3, 1 August 2005**

# Special Issue:
# Boolean and Pseudo-Boolean Functions

**Edited by:**
**Peter L. Hammer**

## Contents

*J.C. Bioch*
The complexity of modular decomposition of Boolean functions 1

*O. Čepek and P. Kučera*
Known and new classes of generalized Horn formulae with polynomial recognition and SAT testing 14

*D. Cohen, M. Cooper, P. Jeavons and A. Krokhin*
Supermodular functions and the complexity of MAX CSP 53

*T.W. Cusick and Y. Li*
*k*-th order symmetric SAC boolean functions and bisecting binomial coecients 73

*A. Faye and Q. Trinh*
A polyhedral approach for a constrained quadratic 0–1 problem 87

*H. Hatami and H. Maserrat*
On the computational complexity of defining sets 101

*T. Jansen and I. Wegener*
Real royal road functions—where crossover provably is essential 111

*P. Kučera*
On the size of maximum renamable Horn sub-CNF 126

*A. Mintz and M.C. Golumbic*
Factoring Boolean functions using graph partitioning 131

*B. Schieber, D. Geist and A. Zaks*
Computing the minimum DNF representation of Boolean functions defined by intervals 154

doi:10.1016/S0166-218X(05)00151-4

*M. Wild*
The many benefits of putting stack filters into disjunctive or conjunctive normal form 174

*W. Xiao*
Linear symmetries of Boolean functions 192

*I.E. Zverovich*
Characterizations of closed classes of Boolean functions in terms of forbidden subfunctions and Post classes 200
